WATER  
EXPERT!

## ✓ Intuitive operation

All important information at a glance: The home screen including quick access function provides an overview of the water quality and the system status. The 4.3" touchscreen also offers user-friendly operation. The software-guided calibration succeeds in no time at all.

## ✓ Modern connectivity

The spaliQ Professional can be integrated into the customer's network and Grünbeck's myProduct app, thus allowing operation from any app or web browser-enabled device – no matter when or where. A Modbus interface also enables integration into a smart home system. Push notifications via email indicate the operating status as well as possible warnings or fault messages.

## ✓ Demand-oriented operating modes

The possibility of high chlorination guarantees the best water quality even with an increased use of the pool. On the other hand, the system can be switched to partial load operation when the load is low or in the event of absences. This reduces the consumption of care products and saves not only resources but money as well.

## ✓ Proven Grünbeck quality

For application in swimming pools and whirlpools in the private sector according to DIN EN 16713. In addition, we provide a wide range of accessories – all from one source. We will be pleased to advise you.
